Annex 1 Section 42 Communities and Assemblages

Lichens /Cen Communities

The Lobarion Community

The following provides some guidance on the identification of the Lobarion lichen community. For fuller details see James, P.W., Hawksworth, D.L., & Rose, F. (1977) *Lichen Communities in the British Isles* pages 322-327 in Seward, M.R.D. (Ed.) (1977) *Lichen Ecology*, Academic Press, London.

When well-developed this is a spectacular community that can include some of the largest foliose lichens. Unfortunately most of its constituent species are highly sensitive to sulphur dioxide, acid rain and excessive ammonia levels and many examples of the Lobarion in Wales are now species poor.

The Lobarion is likely to be present on a tree or shrub or any rock face that supports the following:-

Any species of the genera:

<i>Degelia</i>	<i>Menegassia</i>	<i>Parmeliella</i> (except <i>Parmeliella parvula</i> – see below)
<i>Fuscopannaria</i>	<i>Nephroma</i>	<i>Psuedocyphellaria</i>
<i>Heterodermia</i>	<i>Pannaria</i>	<i>Sticta</i>
<i>Lobaria</i>		

Any of the following species (*=species individually listed in Section 42):

<i>Agonimia octospora</i>	<i>Leptogium brebissonii</i> *	<i>Phyllopsora rosei</i>
<i>Collema fasciculare</i> *	<i>Leptogium cochleatum</i> *	<i>Porina coralloidea</i>
<i>Collema furfuraceum</i>	<i>Pachyphiale carneola</i>	<i>Porina hibernica</i> *
<i>Gyalecta flotowii</i> *	<i>Parmotrema crinitum</i>	<i>Punctelia reddenda</i>
<i>Gomphillus calycioides</i>	<i>Peltigera collina</i>	<i>Thelopsis rubella</i>
<i>Leptogium burgessii</i>		

Any three of the following species:

<i>Acrocordia gemmata</i>	<i>Leptogium lichenoides</i>	<i>Opegrapha soreidifera</i>
<i>Arthonia vinosa</i>	<i>Leptogium teretiusculum</i>	<i>Parmeliella parvula</i>
<i>Catinarina atropurpurea</i>	<i>Loxospora elatina</i>	<i>Peltigera horizontalis</i>
<i>Dimerella lutea</i>	<i>Mycobilimbia pilularis</i>	<i>Pertusaria hemisphaerica</i>
	<i>Normandina pulchella</i>	<i>Thelotrema lepadinum</i>

Mine site community (Metallophytes).

Once Wales probably supported a significant assemblage of lichens associated with natural outcrops of heavy metal-rich rock. Due to the destruction of these outcrops by our mining activities the survival of metallophyte lichens are now almost entirely dependant upon the conservation of old mine sites.

Two special types of lichens are almost completely confined to these sites in Wales:-

1. Obligate metallophytes. Those lichens that appear, in some way, to require heavy metals and only occur on heavy metal-rich substrates.

2. Faculative metallophytes. Those lichens which can tolerate heavy metals, but can be found elsewhere in sites, without such heavy metals. Most of these species are probably poor competitors but can survive

extreme conditions. In Wales, they are mostly confined to metal-rich sites but also occur, for example, on exposed peat on the summit ridges of high mountains.

The following species fall into one or other of these two categories in Wales and any threatened site **supporting more than three of these species** should be subject to a detailed assessment:

<i>Acarospora sinopica</i>	<i>Rhizocarpon oederi</i>
<i>Baeomyces placophyllus</i>	<i>Sarcosagium campestre</i>
<i>Belonia incarnata</i>	<i>Steinia geophana</i>
<i>Epilichen scabrosus</i>	<i>Sterocaulon condensatum</i>
<i>Gyalidea subscutellaris</i>	<i>Sterocaulon dactylophyllum</i>
<i>Lecanora epanora</i>	<i>Stereocaulon delisei</i>
<i>Lecanora gisleriana</i>	<i>Stereocaulon glareosum</i>
<i>Lecanora handelii</i>	<i>Stereocaulon leucophaeopsis</i>
<i>Lecanora subaurea</i>	<i>Stereocaulon nanodes</i>
<i>Placopsis lambii</i>	<i>Sterocaulon pileatum</i>
<i>Placynthiella hyporhoda</i>	<i>Stereocaulon symphycheilium</i>
<i>Polyblastia agraria</i>	<i>Vezdaea spp.</i>
<i>Psilolechia lepraria</i>	
<i>Rhizocarpon cinereovirens</i>	
<i>Rhizocarpon furfurosum</i>	

Mosses and liverworts / Mwsoglau a Llyisiau'r Afu

The Oceanic Ravine Assemblage of bryophytes is likely to be present if a site supports:-

Any one of the following species; *=species individually listed in Section 42
<i>Aphanolejeunea microscopica</i>
<i>Campylopus setifolius</i>
<i>Daltonia splachnoides*</i>
<i>Drepanolejeunea hamatifolia</i>
<i>Hageniella micans</i>
<i>Harpalejeunea molleri</i>
<i>Leptoscyphus cuneifolius</i>
<i>Metzgeria leptoneura</i>
<i>Paraleptodontium recurvifolium*</i>
<i>Plagiochila exigua</i>
<i>Plagiochila heterophylla</i>
<i>Radula volute*</i>
<i>Sematophyllum demissum*</i>

Three or more of the following species
<i>Adelanthus decipiens</i>
<i>Andreaea megistospora</i>
<i>Dicranum scottianum</i>
<i>Fissidens polyphyllus</i>
<i>Jubula hutchinsiae</i>
<i>Lepidozia cupressina</i>
<i>Lepidozia pearsonii</i>
<i>Radula aquilegia</i>
Five or more of the following species
<i>Anastrepta orcadensis</i>
<i>Colura calyptrifolia</i>

<i>Douinia ovata</i>
<i>Heterocladium wulfsbergii</i>
<i>Hygrobiella laxifolia</i>
<i>Hygrohypnum eugyrium</i>
<i>Isothecium holtii</i>
<i>Marchesinia mackaii</i>
<i>Plagiochila bifaria</i>
<i>Plagiochila punctata</i>
<i>Platyhypnidium lusitanicum</i>
<i>Porella pinnata</i>
<i>Rhabdoweisia crenulata</i>
<i>Sphenolobopsis pearsonii</i>

Eight or more of the following species
<i>Bazzania trilobata</i>
<i>Fissidens bryoides</i> var. <i>caespitans</i>
<i>Hyocomium armoricum</i>
<i>Lejeunea lamacerina</i>
<i>Lejeunea patens</i>
<i>Lophocolea fragrans</i>
<i>Plagiochila spinulosa</i>
<i>Saccogyna viticulosa</i>
<i>Scapania gracilis</i>
<i>Solenostoma paroicum</i>
<i>Sphagnum quinquefarium</i>
